## LAYING INSTRUCTION

### TILES FIXING INSTRUCTION

- All the tiles must be checked prior to fixing for quality, batch mix and colour.
- Plaster the surface of the floor to be tiled and allow curing at least two weeks before tiling.
- While fixing pick tiles from various boxes alternatively, lay them in the desired pattern and make sure that they give an acceptable blend of colour and design, please note that shade variation is inherent in manufacturing tiles.
- For fixing tiles we recommend to use the fixing adhesives or equivalent product for the best result.
- For fixing tiles in floor using conventional method, we suggest the following laying instruction:
  - Use cement and sand mortar in the ratio 1:4 Add water to create a consistent paste.
  - Apply 20-25mm of bedding material over the floor area of 1.0 Sq. Ml. at a time.
  - Apply a thin coat of the slurry on the back of the tile to ensure proper and full bedding. Press gently for even adherence of the tiles with surface.

Do not use any heavy materials like iron or hammer to press tile.
- For fixing the tiles on Dado, we recommend the use of adhesive or equivalent materials.
- Allow 3-4 days of bed curing after laying tiles and later fill the joint with grout. We recommend maintaining a joint gap of 1-2 mm between the tiles to allow possible thermal expansion at later stage.
- Please note that company will not accept any liability in case of any problems arising out.
